

## The most complete, user-friendly grow-finish production software on the market.

### What is Visipork?

Visipork is a cloud-based software solution, custom-built to allow for efficient, profitable pork production. Designed by a cross-functional team of pork industry veterans and engineers, Visipork is a complete grow-finish solution, integrating:

- ▶ Load scheduling
- ▶ Movement tracking
- ▶ Group pipeline
- ▶ Automatic payment matching
- ▶ Data analysis

The result? Enhanced production visibility, increased efficiency and maximum profitability, all in one user-friendly package.

In today's rapidly changing pork industry, nothing is more important than production visibility. In order to maximize profits, producers need access to critical operational data at a moment's notice. And that doesn't just mean after-the-fact reports. Solutions are needed to help *do* pork production, not just report on it.

**Introducing *Visipork*™ – Intuitive grow-finish production software designed to increase production visibility, promote efficiency and maximize profitability.**

Unlike other software solutions, Visipork is designed from the ground up to be much more than a data entry and reporting tool. Visipork's load scheduling, movement tracking, group pipeline, automatic payment matching and data analysis features provide efficient workflows, streamlining your day-to-day operations – and letting you get more done.

Best of all, Visipork is a single, tightly integrated solution, allowing producers to easily replace legacy software, spreadsheets and paper files. Information from third-party sources, like feed invoices, sale confirmations, packer payments and kill data, can be imported at the press of a button. There's no more intuitive, efficient way to manage the entire grow-finish cycle.

### Visipork™ Technology

Visipork is a cloud-based grow-finish software solution designed to meet the needs of today's pork producers. Visipork is hosted in some of the most advanced data centers in the world, providing maximum uptime, highly redundant data storage and enterprise-grade security.

**There is no new software to install, and no new hardware to buy. In most cases, *Visipork*™ can be fully implemented – and providing significant ROI – in just 90 days!**

The software was custom-built from the ground up by a cross-functional team of pork industry veterans and engineers. This unique development process – using only modern applications and tools – ensures that Visipork provides value to producers "out of the box," without the need for time-consuming customization. And it's user-friendly enough that any producer can take advantage of its features!

### Transparent, Straightforward Pricing

Visipork pricing is based on the total number of pigs started in nursery and finishing groups per year, billed monthly. The price we quote is the price you pay, period.

We don't charge setup fees. We don't charge subscription cancellation fees. There are no charges other than your monthly service price.

Schick Enterprises is a provider of premium products and solutions for today's pork industry. We pride ourselves in combining decades of industry experience with a thorough understanding of the rapidly changing world of pork production. We offer:

- ▶ Visipork™ grow-finish production software
- ▶ Custom fencing and gating
- ▶ Sow housing and feeding solutions
- ▶ SortAll™ Revolution 2 automated sorting system
